

EVT Alumni Policy

Revision 1.0: 12-10-14

Alumni of the Electric Vehicle Team are valuable assets who provide assistance, guidance, and wisdom to augment the work that the students of the team perform. They provide critical, industry-led experience that is vital to the continued success of the team. This assistance can come in the form of technical questions, as well as industry contacts and expertise.

The role of club alumni is to provide support to team members on various aspects of their current projects, when their assistance is requested. However, all design and manufacturing by the team is the work of students in the organization. Students in the club must be able to seek the answers to problems themselves in order to provide the best available learning experience. While alumni can provide certain assistance and decision making advice to the club, the decisions themselves are also always made by students.

Alumni will be sent invites to events throughout the year, such as final design reviews and certain team social events. These events are great ways to stay involved while still maintaining the Electric Vehicle Team as a student organization.
